Kun Food

1st app presentation

5th Dec 2017

Introduction: Goals

- Help people find custom recipes using criteria like ingredients, caloric value or price
- Create a tool that makes gathering ingredients and cooking more fun
- Build a community of creative and fun individuals that invent new and tasty recipes
- Implement a fun and fluid interface for the users

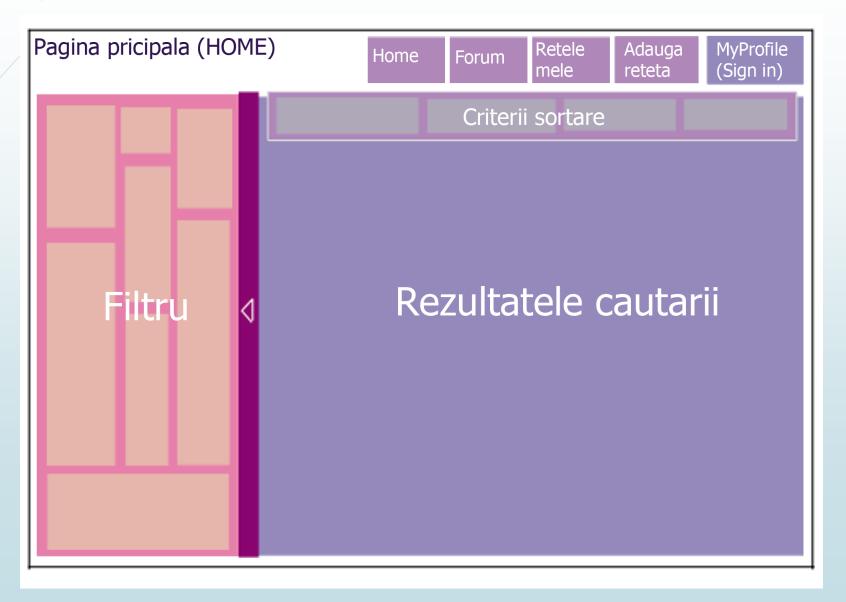

Introduction: Strategy

- Scrum will be the used framework
- Team of 4 developers and testers, one of which will be scrum master
- The development will take place within 7 to 8 weeks with sprints of one week
- Implementation will be done using ASP.NET Core 2.0 framework's built-in MVC support

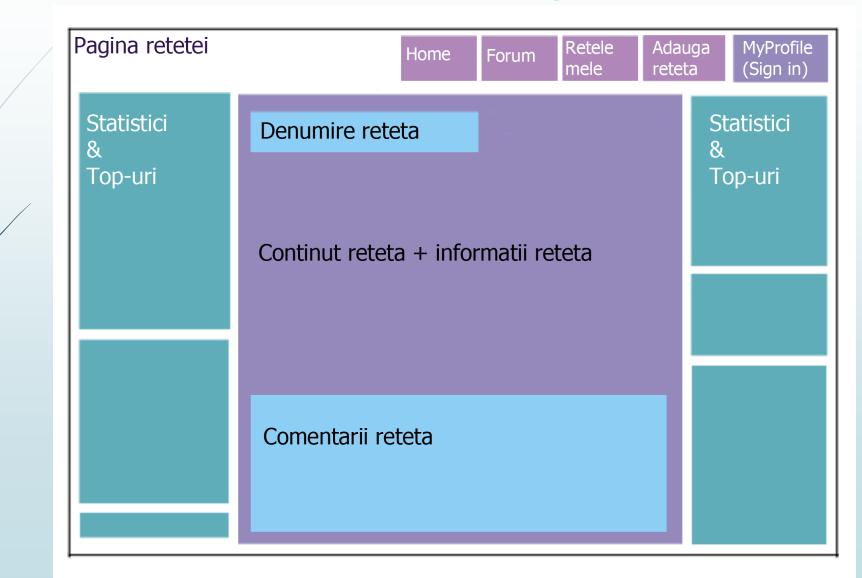

App Description

- Kun Food makes cooking fun and easy
- The application provides a database of recipes bound to approximate prices and reviews from users
- The user filters the recipes by whether they are expensive or not, breakfast, lunch or dinner, type of kitchen etc.
- The application also offers a forum where users can always gain more help
